PROFILE

Fullstack software engineer with 2 years of experience delivering frontend tooling, backend automation, and the integrations to tie them together, improving efficiency and reliability across platforms. Adept in JavaScript/TypeScript (React, Node), Python (Pandas), Go, and Salesforce Apex. Passionate about human-centred design, learning, and building pragmatic solutions and products that make users' lives easier. Bilingual in English and French, adaptable, and energised by collaborative, fast-moving teams.

HIGHLIGHTS

- Consolidated legacy data and converted 10,000+ records for migration into Salesforce using Python, improving reporting capabilities and setting the foundation for long-term insights.
- Enabled scalable program delivery and data reporting at CanU, a youth non-profit, by automating a wide range of previously manual admin workflows - saving 100+ hours annually and directly supporting key funding efforts.
- Reduced data maintenance effort by 80% by implementing an Apex test suite to detect data desyncs.
- Saved 20+ hours/month for internal teams by automating Slack-based support case updates using WebSockets.

EXPERIENCE

Software Engineer (Consultant) – CRM & Data Systems | CanU Canada | Winnipeg, MB | 2024 – Present
(Python, Pandas, SQL, Salesforce Apex, Typescript, Node.js, Go)

- Designed Python/Pandas ETL pipeline to clean, transform, and migrate 10,000+ legacy records into Salesforce.
- Built automated workflows for data validation, deduplication, and post-import tasks using SOQL and Apex.
- Developed internal web tools (React, Go, Node.js) to support program operations and enhance reporting.
- Collaborated with non-technical stakeholders to structure data models that reflect program needs and support long-term growth and funding.

Full-Stack Developer (System Specialist) | Salesforce | Winnipeg, MB | 2022 – 2023
(Salesforce Apex, Java, Javascript, SQL, Python, Jenkins)

- Led post-acquisition CRM support by coordinating documentation and ensuring seamless knowledge transfer.
- Reduced data maintenance time by 80% through creation of Apex test suite to detect pipeline issues.
- Refactored legacy data models to comply with new privacy and security standards.
- Maintained and enhanced REST API integrations through transition with zero disruption to business services.

Associate Software Engineer | Traction on Demand | Winnipeg, MB | 2021 – 2022
(Salesforce LWC & Apex, Java, Javascript, SQL, Python, HTML/CSS)

- Designed end-to-end updates and internal web apps for the shared CRM system.
- Automated Slack case updates using WebSockets, saving 20+ hours/month for support teams.
- Optimized heavy Apex triggers, cutting CPU spike incidents by 15% during peak load.
- Maintained >80% test coverage while managing deployments via Jenkins CI/CD.

SKILLS

Languages: JavaScript, TypeScript, Go, Python, Java, C++, SQL, Apex, HTML/CSS

Frameworks and Tools: React, Node.js, Express, Angular, Pandas, Docker, Jenkins, Git, REST APIs

Competencies: API Design, System Architecture, Internal & User-Facing Tooling, Automation & Data Workflows, Prompt Engineering, Troubleshooting, Human-Centered Design, Developer Experience (UX/DX)

EDUCATION & CERTIFICATES

Bachelor of Science in Computer Science | University of Manitoba | 2021

Certified Salesforce Administrator | Salesforce | 2022

Certified Scrum Master® (CSM®) | Scrum Alliance | 2022

PROJECTS

index (CLI tool) — Virtual media archiver via symlinked timestamps

Go (CLI), filesystem operations

- Scans messy media folders (e.g. legacy drives, phones) and creates a browsable, timestamped folder structure using symbolic links
- Solves digital memory sprawl by enabling efficient archive building without duplicating files or using extra space
- Future roadmap includes a TUI and Windows GUI support for broader platform accessibility

CanIPlayIt — Game subscription aggregator & search service

React, JavaScript, Express, SQL, AWS

- Built full-stack app to check platform availability across subscription services
- Designed relational DB of 1K+ games, deployed with AWS, and tested with real users

Pokemon Fitness Tracker — Gamified daily habit tracker for fitness challenge

React, JavaScript, Google Sheet API

- Designed a light weight web app real-time tracker themed around Pokémon evolutions for a community fitness challenge
- Translated logged metrics (steps, minutes, activity) into XP values and badge progress via custom logic
- Delivered a playful experience that boosted team engagement and motivation through weekly updates

conversionBot — Discord unit converter bot (1,500+ users, 15+ servers)

TypeScript, Discord API

- Public bot using RegEx to convert units (weight, distance)
- Actively maintained since 2021 with scalable, low-latency performance

wikiGrab — Discord interface for wiki content

Python, Discord API, MediaWiki API

- Scrapes and summarizes wiki entries into Discord, using emoji reactions to navigate search results
- Optimized for fast search and retrieval during live chat
